

## 20 Best iPhone Spy Apps

Ever imagined yourself as a character in a James Bond movie where the bad guys are lurking around corners waiting for the right opportunity to grab you and take you to their secret hideout? Okay, maybe not. But if you did, you'd probably have a lot of fun with today's post, where we look into some **apps made for spying with your iPhone.**

Granted, having all of these apps on your iPhone will not make you a spy overnight – please don't take it as challenge by us for you to behave that way – however, you might find some of the apps of the espionage kind here useful to you.

The mission here, if you choose to accept it, is to hunt for your very own iPhone spy app from this list. Some apps will be more useful than others, while others are just for fun. Then, there are some apps only available in the US as they only work with US

mobile numbers. Don't ask us why this is so, we'd ask but we've got a feeling that if they told us, they'd have to kill us!.

### **Contact Spy**

Not sure who is behind the unknown number who just called you? Save that number into your contact list and run it through this search engine app, where It will then try to find out who called you. This feature only works for US phone numbers.

However, you can enter the first and last name of anyone you don't know, and the app will try to find out who that person is. Of course this won't give you the best results if the person's name is 'John Doe'. [\$0.99]

### **Call Log Pro**

This app records the voice conversations of phone calls to another person. You'll have to use the app to call the person and it will only start recording once the person on the line answers the phone. You'll then be able to email yourself the recording for safekeeping.

This app starts out free where you can record conversations for 2 minutes. After that, you'll have to pay a minimum of \$4.99 for 30 minutes of recording time. [Free]

### *Spy Gizmos*

Spy Gizmos gives you a fun and secure way to communicate with your friends. You can use this app to cipher messages and send the coded message to your friends. Your friends who received the coded message can then use this app to find out what was really written.

There are 3 ciphering methods to choose from. You can also write in Morse code where the app can then transmit the sound or flash your screen white and black so that people around you can hear or see the message. [Free]

## *Self Destructing Message*

Self Destructing Message (SDM) is a message app along the lines of Viber or Whatsapp. However, with this app you'll be able to set 'self destruct' timers to your messages. Your friend will have 5, 10, 15, 30 or 60 seconds to read the message that you sent. After that, the message 'self destructs' (gets deleted).

Because of this, there will be no chat history but it is a secure way to ensure no one else reads your messages. [Free]

### *Your Secret Folder*

This app acts like a secret folder to manage private photos and videos. It protects your files with either a 4 number PIN lock or a dot lock. The options they give you include taking a photo with the front camera when someone attempts to unlock the app. There is also the option to include a fake password.

Whenever this fake password is entered, functions to the app will be very limited, and whatever pictures taken with the app won't be saved. [Free]

## GPS Location Tracker

This is a location tracker app for your iPhone which doesn't have to be running to track your phone. You have to register for an account on their website and have Location enabled on the iPhone in order for it to track your phone.

It also uses cellular data or Wi-Fi to upload the location information to a secure server on their website. If there is no cellular data or Wi-Fi available, the information will be stored on the phone until there is a connection available. [\$3.99]

## Spy Recorder

Spy Recorder is an audio-recording app which also helps you schedule reminders for recordings. The phone will vibrate and a notification will appear, prompting you to start recording. You can start recording by tapping on the notification.

This can also be triggered with predetermined locations. You can also save the location data of each recording then attach

and send via email. There is also the feature to pause between recordings, and set the recording duration. [\$1.99]

### ***Secret Voice***

This is another voice-recording app but this app has a built-in web browser which you can use while it is recording. Besides that, you can enable a 'Black-Screen Mode' which prohibits activity on your phone, effectively tuning out any incoming calls or messages. Recordings can be shared by email and are secured by a PIN code. There is also the option of recovery mode which allows you to recover accidentally deleted recordings. Without it, a delete stays permanent. [\$0.99]

### ***Night Recorder***

Launch this app and hit the ON button to begin. It will only start audio recording when there is a loud enough sound. When the iPhone screen is off, you can launch the app by pressing the iPhone power button.

It has 2 recording modes – more or unique files. If you select 'more' files mode, the recording will automatically stop if it

doesn't detect any sound. It will then record to a new file if there is another sound. A 'unique' file means it will record on one file non-stop once the recording starts, which will only stop when you press the on/off button in the app. [\$2.99]

### ***Top Secret Audio Recorder***

Top Secret Audio (TSA) Recorder works like a picture-viewing app where you swipe left and right to view different pictures. However, the app starts recording the moment you tap on the picture. You can add your own pictures or use the ones that came with the app. Since there is no recording interface, no one will know that you are recording audio. You can also passcode lock your recorded files for added security. Files can then be shared or extracted through iTunes. [Free]

### ***Secret Spy Camera Pro***

This camera app has a few functions so people won't know that you are actually recording a video. While the camera is

recording a video, you can enable 'Spy Mode' to make it look like you're browsing a website.

There is also a 'Secret Spy Mode' where the screen only shows a black picture. To use its automatic-snap photo, just set intervals between each photo snap to take and let the app do the rest. [\$1.99]

### ***Secret Camera***

Another photo-taking app, but this one has no shutter sound. You can also set the photos to not have any preview mode. If you want a discreet preview mode, you can use 'Spy Mode': there is a small thumbnail at the bottom corner of your screen, while the rest of the screen looks like a web browser.

That way, no one will know you are really taking photos. You can also passcode lock your pictures and can enable 'Recovery Mode' to recover any photos that you accidentally delete. [\$0.99]

### ***Night Vision Camera***

This app makes you feel like a spy on a mission as you can choose different scopes to look through the camera of your iPhone. You can also choose from 'Night Vision' mode and 'Infrared' mode to make it seem like you're on a mission. To take a picture, simply tap the bottom left corner button of the camera. [Free]

### ***ReconBot***

ReconBot is a stealth video recording app that shows a black screen while it records a video. All your recordings can then be

stored securely within the app which has a dot lock system. If you use the 'Remote View', you can watch your live recording on a unique website link on your computer. Recordings can be trimmed and shared via email. You can also enable location on your iPhone to determine where the recording happened.

[\$0.99]

### ***Spy Cams***

This app explores the feed from many live cameras around the world. It is not known how they have access to these cameras as nothing is stated on their app page. However, it is fun to scroll through security cameras from all around the world. You just might stumble across some interesting sights. [Free]

### **Security Cam**

This is another security recording app to make people unaware that your iPhone is capturing a video. The recording will begin if triggered by motion or sound. There is also the option to take photos every few seconds. The time and date will be shown on the recorded video. The files can then be emailed or exported through iTunes. [\$9.99]

### ***Camster 2***

With this app, you'll get a list of free public cameras that you can view. You can favourite any camera on the list if you find it interesting. Although there is the option to monitor your own network camera, it only works with the paid version of the app.

[Free]

## *Live Cams Pro*

Live Cams Pro is yet another app where you can view public cameras from all around the world. You are also able to add your own webcam and monitor it with this app. It supports a whole list of IP camera models which you can use to monitor your home in case you are going away on vacation for awhile or if you want to keep an eye on things at home, from the workplace. [\$2.99]

## *Cam On! Lite*

This app is another app that has a map full of webcam cameras you can view. Not only that, you can control some of the cameras viewing angle (limited viewing angle) with on screen controls. You can also take a picture of the place you're viewing and save it to your iPhone photo album. [Free]

## *My Webcam*

With this app, you can broadcast your own webcam for the world to see. You can also make it private for your personal viewing. There is a free program compatible with both Windows and Mac that you can use to broadcast your webcam. Because of this broadcasting program it can support any type of USB webcam or the webcam on your laptop. [\$4.99]
